MINI PROJECT IDEAS

Here's a list of some mini project suggestions:

1. Expense Tracker

A simple app to log daily expenses with categories (food, transport, etc.) and visualize spending patterns.

2. Recipe Finder

Search recipes by ingredients; displays cooking instructions and nutritional info using a food API.

3. Password Generator

Creates strong, customizable passwords (length/special characters) with copy-to-clipboard functionality.

4. Language Flashcards

Interactive flashcards for vocabulary practice with flip animation and progress tracking.

5. Bookmark Manager

Chrome extension or web app to organize bookmarks with tags, search, and quick links.

6. Pomodoro Timer

Focus timer with work/break intervals, task tracking, and productivity statistics.

7. Quiz App

Timed trivia game with multiple categories (science, history) and score leaderboards.

8. URL Shortener

Web service that converts long links into short, shareable URLs with click analytics.

9. Memory Game

Card-matching game with difficulty levels (grid size) and move/timer counters.

MINI PROJECT IDEAS 1

10. BMI Calculator

Tool to calculate Body Mass Index with personalized health category feedback.

11. Currency Converter

Real-time exchange rate calculator using financial API (e.g., Forex).

12. Habit Tracker

Calendar-based app to log daily habits and visualize streaks (e.g., meditation, exercise).

13. Music Player

Minimalist audio player with playlist support, progress bar, and volume control.

14. Word Counter

Text analysis tool that counts words, characters, and reading time; highlights frequent words.

15. Local Restaurant Finder

Uses geolocation and APIs like Yelp/Zomato to show nearby eateries with filters (cuisine, rating).

Tech Stack Suggestions:

- Web: HTML/CSS/JavaScript (React/Vue)
- Mobile: Flutter/React Native
- APIs: RESTful services (free tiers available)
- Backend: Python/Node.js for data processing

Choose based on your learning goals! Each project can be scaled from basic to advanced features.
